NOTA / NOTE

Acest plan este valabil pentru zone seismice cu acceleratie orizontala de varf $a_g \leq 0,12g$.
This plan applyes to seismic zones with top horizontal acceleration $a_g \leq 0,12g$.

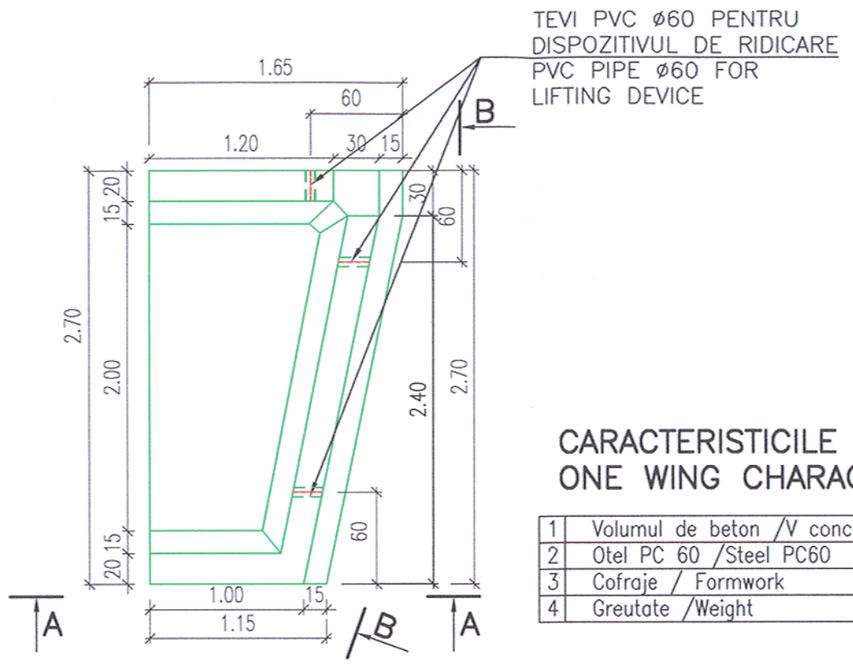
CONVOI DE CALCUL LM71
CALCULATION CONVOY LM71



CARACTERISTICILE UNEI ARIPI
ONE WING CHARACTERISTICS

1	Volumul de beton /V concrete	2,65mc
2	Otel PC 60 /Steel PC60	218,00kg
3	Cofraje / Formwork	20,35mp
4	Greutate /Weight	6,60t

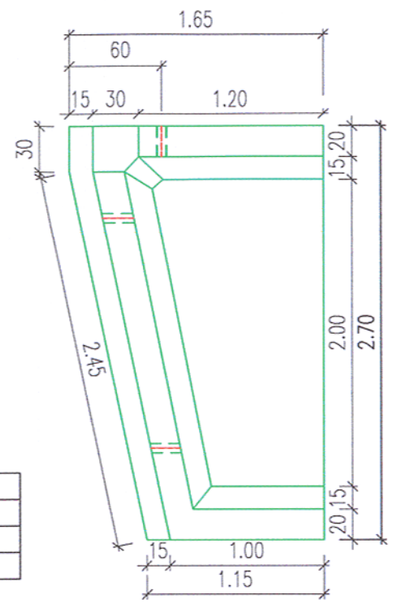


FIGURA 1
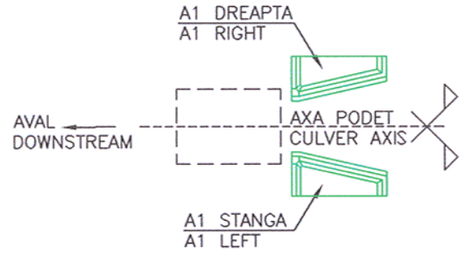
FIGURE 1



ATENTIUNE !
–Prezentul plan contine planul de cofraj pentru aripa A1EN stanga;
–Pentru perechea ei din dreapta se vor pastra aceleasi dimensi–uni, cofrajul fiind orientat invers (vazut in oglinda);
–A se vedea in schita din fig 1.

NOTA:
1 –Aripa prefabricata se va confectiona din beton clasa C35/45 si otel PC60;
2 –Dupa decofrare, fetele interioare ale peretilor si fata superi–oara a placii de baza se vopsesc cu suspensie de bitum filerizat in dublu strat;
3 –Pentru manevrarea prefabricatului se vor lasa orificii amplasate conform planului. Dupa montarea definitiva in amplasament a tronsoanelor, se vor umple cu mortar.
4 –Aripile prefabricate se vor amplasa pe blocurile de fundatie monolite prin intermediul unui strat de mortar de ciment care va fi alcatuit din:
–un strat de nivelare de 2cm
–un strat de 1 cm de fixare pe blocul monolit
Inaintea aplicarii mortarului, suprafata blocului se va curata bine de toate impuritatile;
5 –La executie se vor respecta cu strictete prevederile din prescriptia tehnica NE 013–2002 "Cod de practica pentru executarea elementelor prefabricate din beton, beton armat si beton precomprimat" si din Caietul de Sarcini.
6 –Compactarea pamantului de umplutura din interiorul aripilor se va face cu placa vibratoare.

ATENTION !
–This drawing represents the formwork plan for the left A1EN wing;
–For the right A1EN wing, there will be maintained the same dimensions but the formwork will be placed in mirror;
–To be seen the figure no. 1.

NOTE:
1 –The prefabricated wing will be executed of concrete class C35/45 and PC 60 steel;
2 –After removing the formwork, the interior sides of the walls and the upper side of the bottom plate are painted with filler bitumen suspension in double layers;
3 –To operate the prefabricated element will be provided holes located acc. to plan. Afther the definitive mounting of the section il location, the holes will be filled with mortar.
4 –The prefabricated wings will be placed on the monolith foundation blocks by a cement mortar layer composed by :
–a levelling layer of 2 cm. thickness
–a layer of 1 cm. to fix on the monolith block.
Before mortar laying, the foundation block surface will be well cleaned by all the impurities.
5 –During work construction there will be strictly applied the provisions of the technical prescription NE 013–2002"Practice code for the concrete precast elements, reinforced and prestressed concrete" and Technical Specifications of this project.
6 –Compaction of filling earth from inside the wings is done with vibrating plate.
